Exp 11: Deploying a Zoho Creator Application from Development to Production Environment

1. Aim

To plan, execute, and verify a controlled promotion of the **Loan Application & Pre-Screening Management** app from Development through Stage to Production in Zoho Creator. The release covers the **Loan_Application_Form**, its thirteen Basic Fields, validation rules, acknowledgement workflow, and **Loan_Application_Report**.

2. Procedure

24140127

Phase A: Establish the baseline

Step 1: Open the Creator environments dashboard and record the deployed versions of Development, Stage, and Production. Confirm that borrower data in Production is protected before modifying the form.

Step 2: Check that the Development copy contains Loan_Application_Form and Loan_Application_Report. Record the present field schema and export a release checklist.

Phase B: Prepare the loan application update

Step 3: Arrange the thirteen Basic Fields into Personal Details, Contact Details, Income & Employment Details, and Loan Details & Consent. Configure the mandatory, format, age, positive-income, and consent checks described in the reference assignment.

Step 4: Confirm that a valid submission creates a report row and initiates an acknowledgement email to Email_Address. Ensure that the email contains no PAN, income, or liability details.

Phase C: Promote to Stage

Step 5: Select the loan application in Publish to Stage. Record the release version, affected components, deployment notes, and notification recipients.

Step 6: In Stage, test empty mandatory fields, invalid email and phone formats, under-age Date_Of_Birth, nonpositive Monthly_Income, unchecked consent, and a valid applicant record.

Phase D: Approve and publish to Production

Step 7: Compare the Stage schema and workflow against the approved release checklist. Verify that the report can be filtered by Loan_Type and Monthly_Income and that only authorized loan officers can view applicant data.

Step 8: Select the validated Stage build for Production. Schedule a suitable deployment window and confirm rollback and backup arrangements before publishing.

Step 9: After deployment, submit a controlled test application, check the acknowledgement, inspect the report row, and confirm that the consent field was recorded.

3. Output

3.1 Release package

Component	Included change	Stage acceptance check
Loan_Application_Form	Thirteen Basic Fields in four sections	Every field appears with the correct type
Field validation	Required, email, phone, adult age, positive income, consent	Invalid inputs are rejected with clear messages
Loan_Application_Report	Submitted applications and loan officer filters	New row appears; Loan_Type and Monthly_Income filters work
Acknowledgement workflow	Email to applicant after successful submission	Message arrives without sensitive data

3.2 Environment promotion path

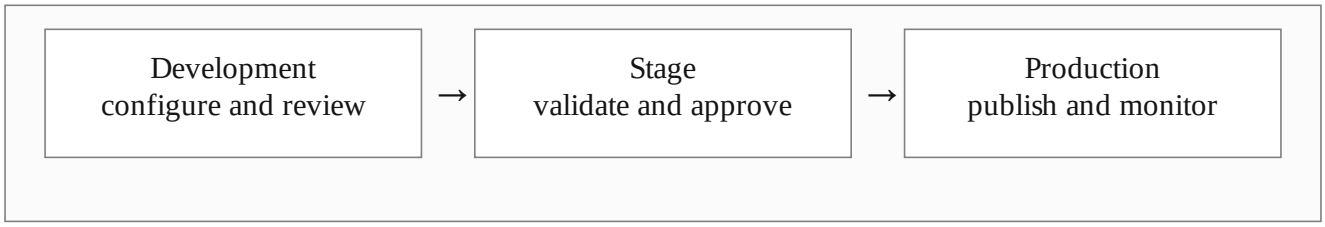

Figure 1: Controlled release path for the loan application

3.3 Stage verification: applicant details

Check identity and contact inputs before publishing.

Illustrative workflow for the Loan Application & Pre-Screening Management app

Applicant_Name, Date_Of_Birth, and Contact_Number are mandatory. Email_Address uses format validation; PAN_Number remains a Single Line field and should not be exposed in routine notifications. Date_Of_Birth must indicate that the applicant is at least 18.

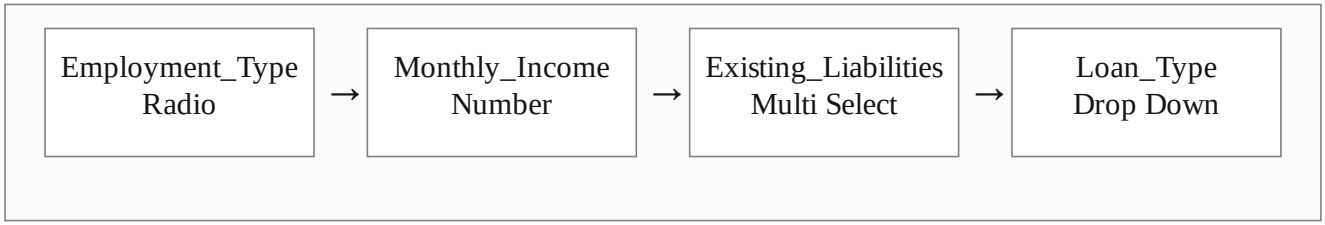
Acceptance evidence to capture

- Form Builder view showing the field types and four sections.
- Preview of a valid submission and rejection messages for invalid values.
- A report row created from an approved test entry.

24140127

3.4 Stage verification: income and loan details

Check that the pre-screening data is complete and suitable for manual review.



Illustrative workflow for the Loan Application & Pre-Screening Management app

Employment_Type, Monthly_Income, and Loan_Type are mandatory. Monthly_Income must be greater than zero. The list of Existing_Liabilities is descriptive; it does not provide loan balances or support an automated debt-to-income calculation.

Consent and scheduling

Purpose_Of_Loan is a Multi Line description. Preferred_Callback_Time is a Time field for the loan officer’s call. Submission is blocked until Consent_For_Credit_Check is checked.

24140127

3.5 Submission and acknowledgement

A valid form submission creates a report entry and triggers an acknowledgement.

Illustrative workflow for the Loan Application & Pre-Screening Management app

The acknowledgement should confirm receipt and provide the next step: a loan officer reviews the application and calls at the preferred time for document verification. It should not say that a loan has been approved.

Negative test matrix

Test	Expected result
Unchecked credit-check consent	Submission blocked
Date of birth under 18	Submission blocked
Monthly income = 0	Submission blocked
Malformed email or phone	Validation error
All valid required inputs	Report row and acknowledgement created

24140127

3.6 Deployment audit matrix

Environment	Purpose	Required evidence	Release gate
Development	Configure form, report, and workflow	Schema inventory and change record	Peer review completed
Stage	Test with nonproduction applicant records	Validation and workflow results	All acceptance tests pass
Production	Serve borrowers and loan officers	Deployment status, monitoring, audit log	Authorized release approval

3.7 Post-deployment checks

1. Compare form schema and workflow settings with the approved Stage release.
2. Verify a controlled test row in Loan_Application_Report.
3. Confirm loan officer access and restrict public access to private applicant records.
4. Review failed submissions, email errors, and rollback readiness.

Record the actual environment versions and deployment timestamps after execution. The assignment reference does not provide live release history.

24140127

4. Result / Observations

The proposed lifecycle promotes a single reviewed loan application build through Development, Stage, and Production. Stage testing focuses on the thirteen field types, applicant age, income range, consent, report creation, and acknowledgement delivery.

1. The Production release should proceed only after the Stage checklist passes and the loan officer role can access the report.
2. Applicant PAN, contact, address, income, and liability data require controlled access during deployment and testing.
3. Environment version, migration status, and test evidence must be recorded from the actual Creator workspace to claim a completed deployment.

Final release checklist

Control	Pass criterion
Form completeness	All 13 Basic Fields present
Validation	Mandatory, format, age, income, and consent rules pass
Report	Loan_Application_Report stores valid entries and supports filtering
Notification	Acknowledgement sent without sensitive financial fields
Access	Authorized loan officers only can inspect applicant records
