Exp 4: Data Modelling and Form Design for a Business Application in Zoho Creator

1. Aim

To design and implement a structured **Loan Application & Pre-Screening Management** form in Zoho Creator using all thirteen Basic Fields, suitable sections, field validation, and a report for reviewing submitted applications.

2. Problem Statement

Paper and loosely structured loan enquiries are often incomplete, difficult to read, and slow to route to the correct loan officer. The proposed application collects applicant identity, contact, income, loan preference, and consent information in one consistent record so that basic completeness checks can occur before review.

3. Data Model

The primary entity is **Loan_Application_Form**. Each submission creates one application record. Its fields are grouped into Personal Details, Contact Details, Income & Employment, and Loan Requirement & Consent.

Entity	Key	Purpose
Loan_Application_Form	Record ID	Stores one applicant's loan enquiry and pre-screening inputs
Loan_Application_Report	Record ID	Presents submitted records for authorized review

24149027

4. Form Sections

- Personal Details: Applicant Name, Date of Birth, and PAN Number.
- Contact Details: Email Address, Contact Number, and Residential Address.
- Income & Employment: Employment Type, Monthly Income, and Existing Liabilities.
- Loan Requirement & Consent: Loan Type, Purpose of Loan, Preferred Callback Time, and Consent for Credit Check.

5. Field Dictionary

Field	Basic field type	Purpose
Applicant_Name	Name	Applicant's full name
Email_Address	Email	Electronic communication
Residential_Address	Address	Current residence
Contact_Number	Phone	Callback contact
PAN_Number	Single Line	Tax identity reference
Purpose_Of_Loan	Multi Line	Applicant's stated requirement
Monthly_Income	Number	Indicative repayment capacity
Date_Of_Birth	Date	Age validation
Preferred_Callback_Time	Time	Convenient contact time
Loan_Type	Drop Down	Requested loan product
Employment_Type	Radio	Employment category
Existing_Liabilities	Multi Select	Current repayment obligations
Consent_For_Credit_Check	Checkbox	Records applicant consent

6. Validation Rules

- Require Applicant Name, Contact Number, Date of Birth, Employment Type, Monthly Income, Loan Type, and credit-check consent.
- Validate email and phone formats; accept Monthly Income only when greater than zero.
- Calculate age from Date of Birth and prevent submission when the applicant is below the permitted adult age.
- Block submission until Consent for Credit Check is selected and display a clear correction message.

7. Procedure

1. Create the Loan Application Form application and add Loan_Application_Form.
2. Add the thirteen Basic Fields with the names and field types listed above.
3. Arrange fields under four section headings and configure required-field settings.
4. Add an on-validate Deluge workflow for income, age, and consent checks.
5. Publish the form, submit a sample record, and review it in Loan_Application_Report.

8. Output

8.1 Loan Application Form Builder

The configured form uses the complete thirteen-field loan data model and keeps related information together in a clear data-entry flow.

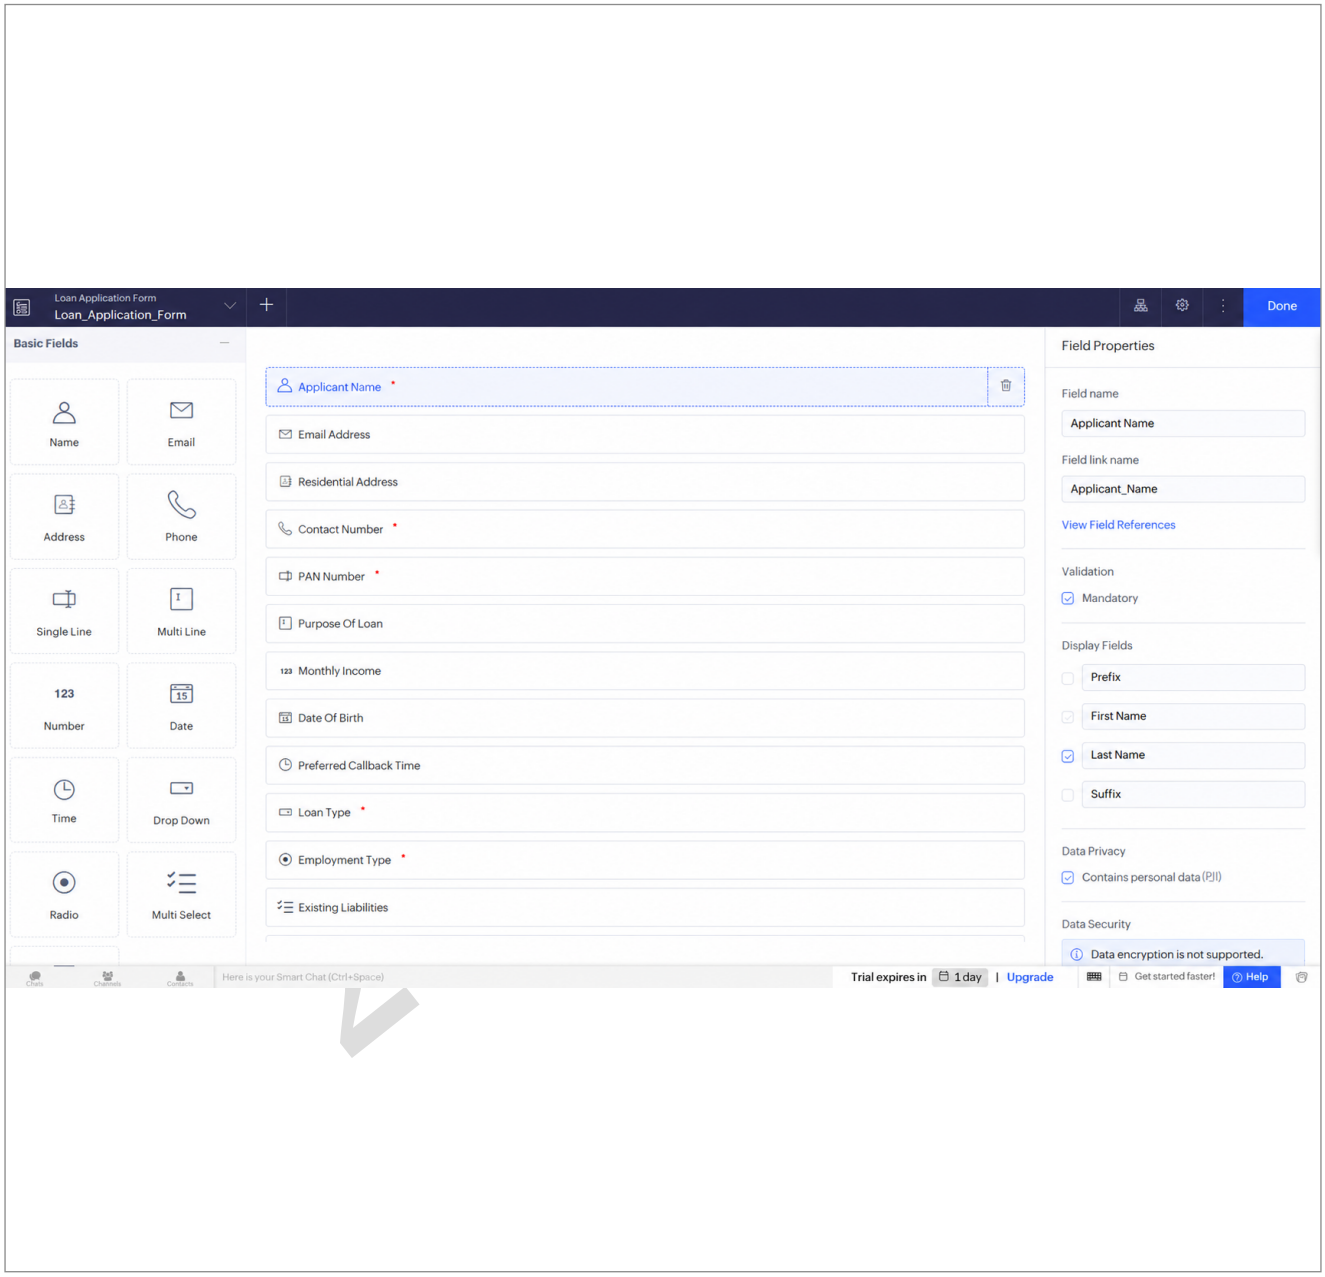

Figure 1: Loan_Application_Form in the Zoho Creator form builder

8.2 Form Validation and Live Entry

The validation workflow checks values before submission. The live form presents the applicant, financial, loan, and consent fields in a single structured interface.

Figure 2: Deluge validation for income, age, and consent

8.3 Loan Application Report

Submitted applications are displayed in Loan_Application_Report so an authorized reviewer can confirm contact details, requested product, income, employment type, and callback preference.

9. Result

- A normalized thirteen-field loan application data model was defined using Zoho Creator Basic Fields.
- The form layout supports consistent data entry and reduces missing or ambiguous loan enquiry information.
- Validation logic provides an initial completeness and eligibility screen before review by a loan officer.
- The report provides a single view of submitted applications while access controls should restrict sensitive identity and financial data.
